

# ETI's Instructor-Led Live Web GD&T Public Workshops

## Receive Real-Time GD&T Instruction Through the Convenience of the Internet

ETI's Fundamentals of GD&T public workshop is now available through live web training. Unlike automated web training, this is an authentic real-time classroom with an instructor teaching concepts and answering questions live over the internet.

GD&T live web training provides all the features of the traditional onsite classroom: it's comprehensive, interactive, and allows the instructor and students the ability to give, receive, and discuss information. It also provides advantages beyond traditional training: it's convenient, cost-effective and allows flexible scheduling, while still offering all the benefits of face-to-face delivery. It fills the gap between classroom training and self-paced e-learning.

## Save Time and Money

GD&T live web training eliminates travel time and expenses. You pay for the training, not the additional administrative costs of flights, hotels, and rental cars. Live web training allows companies and individuals located throughout the world to take advantage of ETI's public workshops through the convenience of the internet.

Training needs often go unmet due to looming projects and deadlines. Employees can attend live web GD&T public workshops during a few half-day sessions, and the company's need for training can be fulfilled with less disruption to critical production schedules.

## As Interactive as a Traditional Workshop

With the adoption of broadband and live video, live web training has become interactive and collaborative. Our instructor leads the class step-by-step through a traditional ETI workshop. The training includes question and answer sessions, working through exercises, and instructor insights and comments. Live web training allows full participation between students and instructor.

ETI's live web training includes:

- Live video of our certified GD&T instructor
- Real time audio communication through direct dial or the computer
- ETI's instructional presentation and materials
- Desktop/application sharing where participants can view anything the presenter has shown on screen
- Annotation tools that allow the instructor to highlight and better illustrate concepts
- Technical support for live web training setup
- A 30-minute pre-session before the workshop that includes audio, video, and internet software optimization

## No Special Equipment Required

Attending an ETI live web public workshop doesn't require specialized equipment. The presentation runs in a web browser, and the technology required is commonly found in most homes and organizations.

To take advantage of a GD&T live web workshop, you need:

- A Windows-based computer
- High-speed internet access (T1 or faster)
- Phone line for teleconferencing
