ETI's Website Has an Exciting New Look and More GD&T Resources

Etinews.com has an exciting new look, more GD&T resources, and a Solutions section with information about geometric tolerancing and training options.

Westland, MI - Effective Training Inc. (ETI), an internationally recognized leader in the field of geometric dimensioning and tolerancing (GD&T) has launched a new, completely redesigned website. Long considered an important industry resource, etinews.com now has a more contemporary look, more information, and new departments.

The new ETI Solutions section answers questions about geometric tolerancing, its benefits, and GD&T training options. The new Services section features the many training and consulting options available from ETI. The GD&T Resources section includes technical papers, a GD&T glossary, a technical tip archive, and more. The Employment department announces career opportunities at ETI. The site's navigation has been streamlined, and a new search feature allows readers to easily find any topic.

"ETI developed one of the first websites devoted to GD&T in 1996. Our new website reflects a major advancement for ETI," says founder and president, Alex Krulikowski. "We've expanded our resources and content to meet constantly evolving client needs, and the site now accurately represents our capabilities. Of course, this site will always be a work in progress. We have plans to include more training options, more resources, and more features every few months."

One new feature in development is a calculator that provides organizations with a formula for discovering the potential savings from the proper use of GD&T. Website visitors can still access previous resources, like the convenient online product catalog and shopping cart, the interactive GD&T message board, and the digital tolerancing forum that discusses solid model tolerancing.

For the past two years, the website's most popular feature has been ETImail, a free online GD&T newsletter. The newsletter is published quarterly, and each issue features an article about GD&T and its implementation. Other e-newsletter highlights include items about standards issues, a mailbag of GD&T questions and answers, and technical tips. Access the current issue, read the archives, or subscribe online at the website: www.etinews.com.

ETI is a world leader in the field of geometric dimensioning and tolerancing (GD&T). The company provides workshops that teach GD&T fundamentals and advanced concepts; tolerance stacks; an ISO/ASME standards comparison; a GD&T overview, and the ASME Y14.41 Standard for Solid Model Tolerancing. They are an international supplier of GD&T training software, books, videos and other teaching materials.
